

Managed Microsoft Sentinel service offering

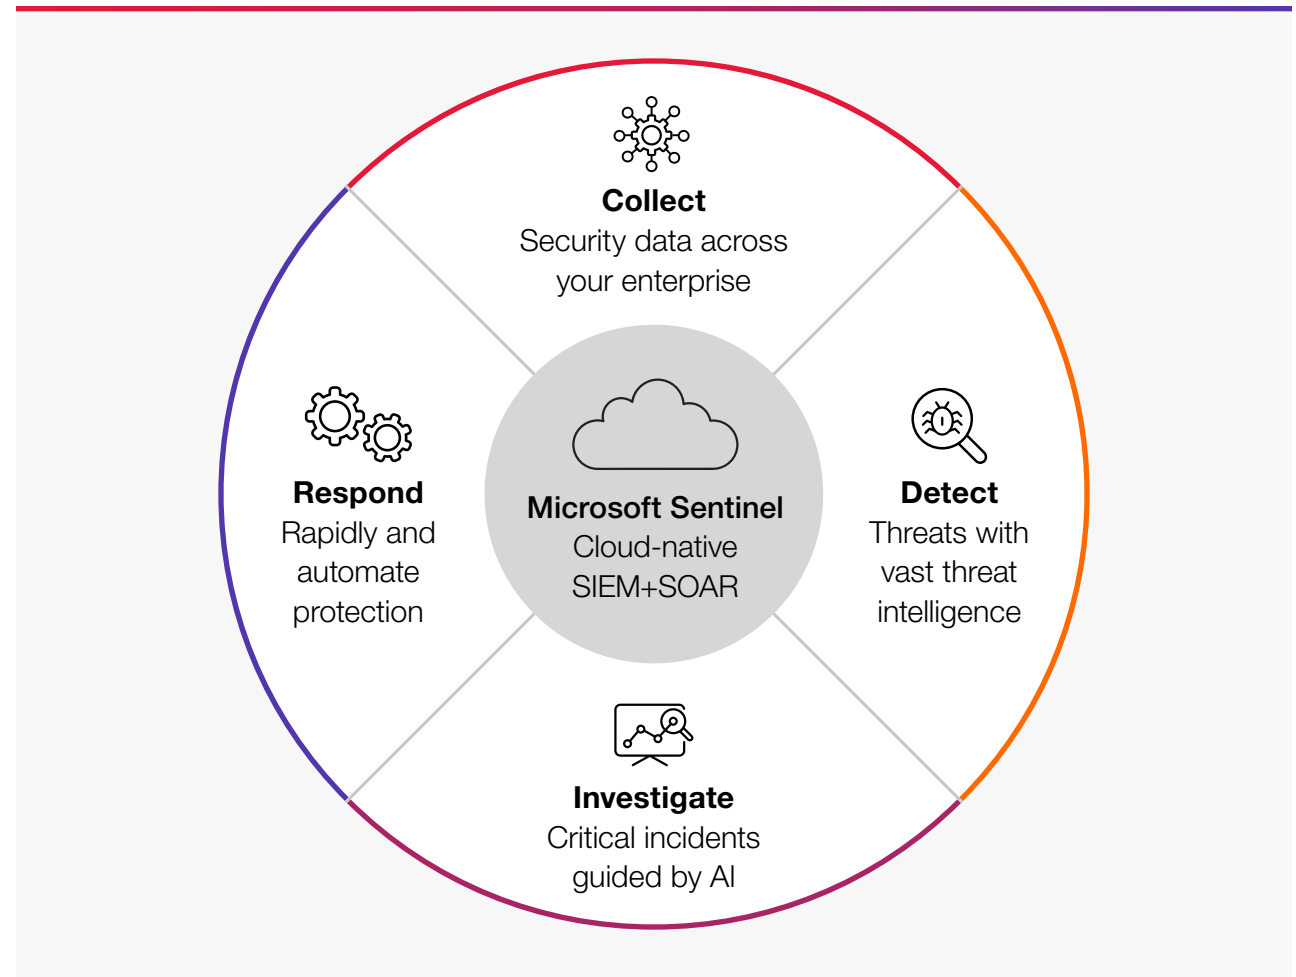

Microsoft Sentinel

Microsoft Sentinel is a scalable, cloud-native solution that provides:

- Security information and event management (SIEM)
- Security orchestration, automation, and response (SOAR)

Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise. With Microsoft Sentinel, you get a single solution for attack detection, threat visibility, proactive hunting, and threat response.

Microsoft Sentinel is your bird's-eye view across the enterprise alleviating the stress of increasingly sophisticated attacks, increasing volumes of alerts, and long resolution time frames.

CGI's Managed Microsoft Sentinel service offering

As a Microsoft managed security services provider (MSSP), CGI partners with Microsoft to implement Sentinel for a range of clients across the country. As the core of a security operations center (SOC), the CGI team's implementation of Sentinel is based on a four-tiered approach.

1

Consulting

Assess customer environment, identify existing security implementations and report on any gaps and vulnerabilities

2

Systems integration

If the client has a Sentinel license but no expertise to configure and implement the solution – we address this gap and address vulnerabilities

3

Run and maintain

Monitor level one and level two incidents, follow up with incident report procedures and apply our own threat intel intelligence mechanisms

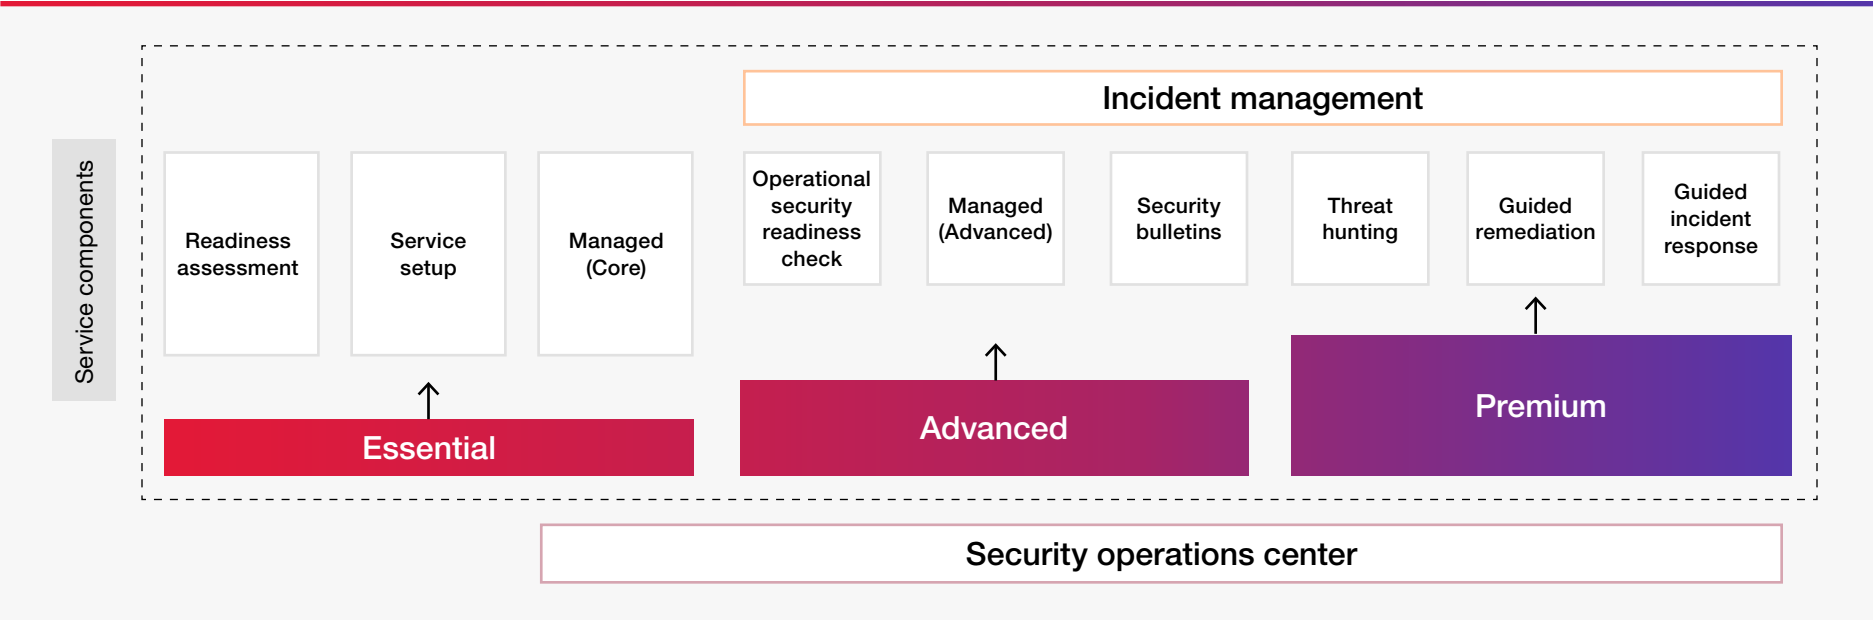

4

Breach response

Prepare client teams to deal with the threat and respond effectively through simulation training

Managed Microsoft Sentinel services offering tier

CGI’s managed Sentinel security services help commercial and government organizations manage their security needs—from compliance and audits to policies and architecture. Our local, dedicated teams are backed by strong global capabilities.

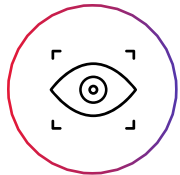

Start your security journey with our “**Essential**” tier; by onboarding Sentinel services for a managed security information and event management experience. This tier provides initial readiness assessment and basic setup of Sentinel.

With the “**Advanced**” tier, you can add an advanced layer of management, which is forerun by a security operations assessment.

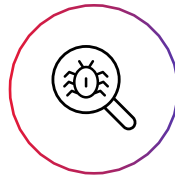

As part of the “**Premium**” tier, CGI security consultants will implement threat hunting and provide guided incident response, followed by guidance for remediation so that the environment is threat free.

Unique features of CGI's managed Microsoft Sentinel service

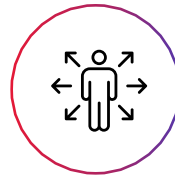

Complete Microsoft ecosystem visibility and optimization

We ensure centralized visibility and account for risks across your cloud ecosystem. Our Microsoft security experts optimize your cybersecurity controls and overall posture.

Unparalleled threat detection and response

Our experts will build a responsive security operation by combining cutting edge technology to stop and remediate cyber threats across your environment.

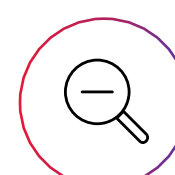

Maximum ROI on Microsoft cloud investments

Unlock the full potential of the controls and tools that exist within Microsoft Sentinel and benefit from our cybersecurity experts who become a 24/7 extension of your team.

Highly certified expertise

We have highly trained and certified Microsoft cloud engineers who tackle your environment with confidence.

Reduce time of detection and fatigue

We offer the optimal best practices implementation of Microsoft Sentinel, and help you reduce time of detection and fatigue from the explosion of alerts.

About CGI

Insights you can act on

Founded in 1976, CGI is among the largest IT and business consulting services firms in the world.

We are insights-driven and outcomes-based to help accelerate returns on your investments. Across hundreds of locations worldwide, we provide comprehensive, scalable and sustainable IT and business consulting services that are informed globally and delivered locally.

About CGI's cybersecurity services

For more than 25 years, CGI has been helping organizations across the globe achieve the most appropriate and effective levels of protection for their changing business. Through our team of 1,800 cybersecurity professionals, nine security operations centers, and two certification and test labs, CGI provides a diversity of services including strategic and technical cybersecurity consulting, engineering and architecture, advanced Managed Security Services and Incident Response. With CGI, public and private sector organizations gain a powerful and dynamic cyber force multiplier.
