

Better understand and reduce
your cloud carbon footprint

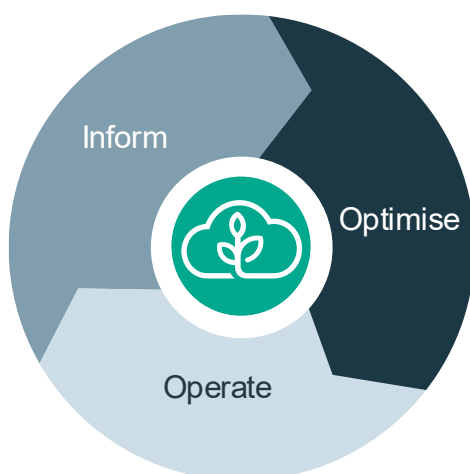

Expert approved recommendations and market leading tools to help you reduce your carbon emissions and demonstrate the impact you've made.

The cloud and continual change that comes with it have led organisations to rethink the role of sustainability in their operations.

Claranet's GreenOps service is a managed offering to help you better understand your carbon emissions, improve sustainability reporting across your business and make carbon reduction recommendations with support from our expert team.

Our team of industry experts will use our exclusive tooling to help you understand your carbon emissions in a way that makes sense to your business, reduce that overall number, and report back to your stakeholders on how much progress has been made with real metrics.

The GreenOps journey consists of three iterative phases

Inform: to provide visibility and allocation of carbon emissions so your business has a clear view of what is being used and what will be used in the future.

Optimise: to strategically reduce your carbon emissions. This phase involves reducing services or upgrades you no longer need, automating, rightsizing resources, optimising databases and other recommendations.

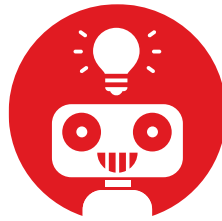

Operate: to help your business create and adopt a GreenOps framework that provides continuous carbon emission reporting and courses of action to reduce that number.

Our market leading GreenOps tooling

Multi-cloud view

One tool, one language and one report across all your cloud environments

Data how you need it

Powerful algorithms give you more detail so you can see it in a way that makes sense to your business

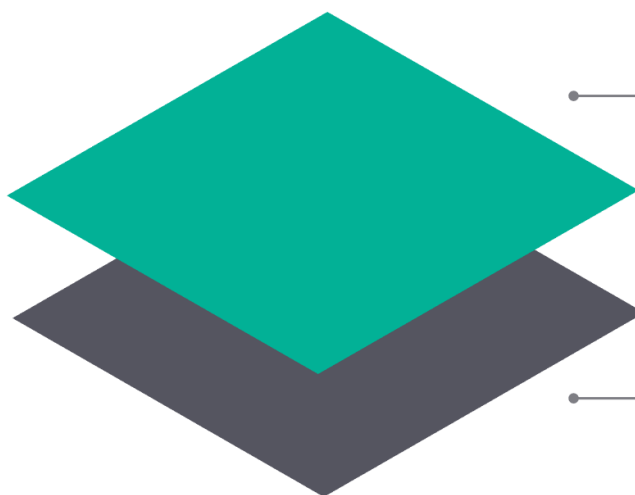

Target tracking

Track progress against your long term sustainability targets and show how you're making a difference

GreenOps service tiers

There are two tiers of service depending on how much expert support you require in driving your sustainability agenda. Our specialist team can help you to select the right tier for your business based on the deliverables required.

Enhanced

Pro-active GreenOps Delivery
