

# APPLICATION AND DATABASE MODERNIZATION **3 DAY WORKSHOP**

Your Cloud migration and modernization journey starts by **aligning stakeholders**, defining a strategy followed by **discovering and assessing** your environment and building a business plan. This workshop will help you determine the resources needed with common Migration and Modernization scenarios.

To support your modernization requirement across **Applications and Data**, we can take advantage of some tools from the Microsoft solution desk that generate a number of outputs and reports. This Workshop is designed to help you **interpret and comprehend** these results. The goal is to help you understand the report outcome, support and help you determine a high-level plan and strategy.

We'll **advise and guide** through the process to clearly determine where you are, so you can establish a path to migrate your different workloads to Azure. This workshop, aligned to **Microsoft Cloud Adoption Framework for Azure (CAF)**, is the first step in defining your Cloud Strategy. We will help you build a business case for moving to the cloud, as well as promoting organization alignment with key stakeholders on adoption roadmap.

Most of all, we will ensure that the strategy and planning are aligned with your expectations, needs and resources.

Our approach helps you drive adoption efforts that capture targeted business value in a cross-functional model. We will **map your cloud adoption strategy to specific cloud capabilities** that will allow you to transform your business.

**NEXT STEPS:** Ask for an in depth **4-week App and Database Modernization Assessment**.

## Workshop Goals

### Define and document the benefits

Meet with key stakeholders and executives to document the advantages of cloud adoption.

### Document Business Outcomes

Engage motivated stakeholders and executives to document specific business outcomes.

### Evaluate financial considerations

Learn how to use the cloud to make your IT cost structure more flexible. Then, build a business case to adopt the cloud.

### Understand technical considerations

After the initial analysis of your application, we'll outline high level requirements in order to move your application to Azure.
