WHAT IS A CHATBOT?

A CHATBOT IS A COMPUTER PROGRAM THAT SIMULATES AND PROCESSES HUMAN CONVERSATIONS

(either written or spoken), allowing humans to interact with digital devices as if they were communicating with a real person.

HOW CAN I USE A CHATBOT?

They are often used to move simple and repetitive tasks, easily automate common tasks such as updating passwords.

WHY TO USE A CHATBOT?

Chatbots increase operational efficiency, allow businesses to easily resolve many types of customer queries and issues, while reducing the need for human interaction.

WHAT DO I NEED TO START IMPLEMENTING A CHATBOT?

Today there are different tools widely available that allow you to create a chatbot, however not all these tools promise to create sophisticated chatbots.

That is why Microsoft for several years has also bet on the world of chatbots, and created this framework called "Microsoft Bot Framework" for the creation of highly sophisticated and intelligent chatbots.
